Standard delivery time is 3-5 business days

Express delivery options are available for an additional fee

## FAQ:

A: Harley-Davidson offers three types of brake pads: Original Equipment (OE), Genuine Motor Parts (GMP), and Screamin' Eagle Performance (SEP).

Q: What is the difference between OE, GMP, and SEP brake pads?

A: OE brake pads are designed to meet the original specifications of your Harley-Davidson motorcycle. GMP brake pads are made with the same materials as OE, but with added features such as noise reduction technology. SEP brake pads are high-performance brake pads designed for racing applications.

Q: How often should I replace my brake pads?

A: It is recommended to replace your brake pads every 10,000-20,000 miles or when the brake pads reach a minimum thickness of 0.04 inches.

Q: What is the difference between organic and sintered brake pads?

A: Organic brake pads are made with materials such as rubber, fiber, and resin. They provide a quiet and smooth ride, but wear out faster than sintered brake pads. Sintered brake pads are made with metal particles fused together under high heat and pressure. They provide better stopping power, but can be noisy and wear down the rotor faster.

Q: Can I install brake pads myself, or do I need a professional mechanic?

A: It is recommended to have a professional mechanic install brake pads, as improper installation can lead to brake failure. However, if you have experience with motorcycle maintenance and a service manual, you may be able to install brake pads yourself.
